## On a three-dimensional tumor-virus compartmental model

This Mathematica Notebook is a supplementary material to the paper "On a three-dimensional and two four-dimensional

oncolytic viro-therapy models". It contains some of the calculations and illustrations appearing in the paper.

- 1) Section 2 (in paper): Deterministic model with Logistic growth [Tian2011]
- 0) Definition of the model [Tian11]:

```
SetDirectory[NotebookDirectory[]];
In[1]:=
          AppendTo[$Path,Directory];
          Clear["Global`*"];
          (*Some aliases*)
          Format [\beta v] := Subscript [\beta, v]; Format [\beta y] := Subscript [\beta, y];
          (***** Four dim Deterministic epidemic model with Logistic growth ****)
          x1=\lambda x(1-(x+y)/K)-\beta x v;
          y1=\beta \times v -\beta y y z - \gamma y;
          v1=-\beta \times v - \beta v \quad v + b \quad \gamma y - \delta v;
          par={\lambda,\delta,\beta,b};X={x,y,v};
         val={0.36,0.44,0.11,28};
          parN=Thread[par→val];
          par2=Thread[\{\lambda,\delta\}\rightarrow\{0.36,0.44\}];
          cp = \{\lambda > 0, \delta > 0, \beta > 0, b > 1\};
          c3dim=\{\beta v \rightarrow 0, \beta y \rightarrow 0, \gamma \rightarrow 1, K \rightarrow 1\};
          cnTian=\{\lambda\rightarrow 0.36, \beta\rightarrow 0.11, \delta\rightarrow 0.44, K\rightarrow 1, \gamma\rightarrow 1, \beta v\rightarrow 0, \beta y\rightarrow 0\} \ (*Numerical values of Tian*);
          dyn=\{x1,y1,v1\}/.\beta y\rightarrow 0/.\beta v\rightarrow 0(*Tian 11 case with K>0*);
